EDUCATION

University of Bristol

BSc in Computer Science (1st Class Hons)

Bristol, UK

2017–2020

- Awarded prize for best second-year group software development project.

EXPERIENCE

Arm

Graduate Embedded Software Engineer in Open Source Software Group

Cambridge, UK

2021–Current

- Porting low-level software to the Morello (CHERI) platform.
- Produced patches in C and AArch64 assembly as part of a project porting the open-source C standard library implementation musl to a new prototype platform.
- Ported larger components of the C library, including the memory allocator and POSIX threads. Considered security and hardening against memory safety bugs at every stage of design and implementation.
- Created a minimal test distribution of Linux for use on an Arm Fixed Virtual Platform, with the ability to run userspace applications in pure-capability mode. This provided the framework for adding FVP-based testing to the CI pipeline (alongside existing emulator-based testing) for further proof of functionality.
- Liaised with multiple teams to ensure coordination between libc, kernel ABI, compilers and debuggers.
- Provided code review including feedback and improvements for patches developed by others for the musl project.

University of Bristol

Teaching Assistant in Department of Computer Science

Bristol, UK

2019–2020

- Delivered and created content for several Computer Science courses, including content involving operating systems, concurrency, and a software engineering project.
- Provided guidance and troubleshooting assistance to students in both in-person and online lab sessions, including for a course in which students develop a basic Armv7-A multitasking kernel.
- Interviewed students in viva-style coursework assessments, and assisted with subsequent coursework marking.
- Assisted with the creation and improvement of lab sheets (including skeleton and solution code).

Evolve East Anglia CIC

Support Worker

Norwich, UK

2019–Current

- Assisting vulnerable adults with transitioning to a permanent living situation after suffering mental difficulties.
- Handled crises swiftly, independently and effectively.
- Developed communication skills and knowledge about wellbeing and mental health.

SKILLS

- **Low-Level Software & Architecture:** C, C++ (inc. 11/17/20 standards), Armv7/8/9 (assembly & architecture), RISC-V, CHERI.
- **Teaching:** Experience as teaching assistant, coursework marker, knowledge sharing presentations.
- **Design:** 3D modelling, vector graphics, Photoshop.

LANGUAGES

- **English:** Native speaker
- **German:** CEFR A2/B1 (Elementary/Low Intermediate)
